Citation Key	Way of running	Documentation and Setup Instruction	Special inptus or outputs	Process Models	Notes
constraintchecking	ProM	None	Constraint Graph Builder	Object Centric Constraint Models	Throws Null Pointer Exception
oclpm	ProM	None		Object-Centric Local Process Models (Small Petri Nets)	Throws Null Pointer Exception
ocpa	pypi (only supports ocel 1.0), github ocel 2.0 branch	https://ocpa.readthedocs.io/en/latest/index.html		Petri Net, Variant	Imports are very slow and the project looks abandoned. See https://github.com/ocpm/ocpa/issues/19 . The ocel2 branch is not installable and appears to require Python 8.
pm4py	pypi	https://processintelligence.solutions/static/api/2.7.16/		Petri Net, Directly Follows Graph	Process outputs are returned as tuples of flattened, case-centric representations. DataFrame constants are difficult to work with, and function naming is confusing.
rust4pm	cargo	process_mining - Rust			Support is limited to importing OCELs in Rust and returning an OCEL instance as output.
pm4js	npm	https://github.com/pm4js/pm4js-core/blob/HEAD/DOCS.md		Petri Net, Directly Follows Graph, Buisness Process Models	The documentation is very minimal and quite short.
olap	pypi	(example projects): https://github.com/jalaliamin/ResearchCode		Directly Follows Graph	
ocpm	Hosted (https://www.ocpm.info/)		Uses Process Models as Input fields for filtering.	Petri Net, Directly Follows Graph, Buisness Process Models	The implementation is quite messy. The site runs entirely on the client, which makes it laggy, and some input fields are not very user friendly.
ocel2	Hosted (https://ocelot.pm/)		Filtering input field for time with bar chart		The project was closed source and was later removed from the private repository.
ocpi	Installers	None	Fields populated with object types and activities	Petri Net, Variants	The work is described as open source, but the implementation cannot be found.
opera	Web App (manually build with docker)	in repository	OCEL Fields, Annotated Petri Net with clickable transitions	Petri Net	The python-dev setup is broken. There appears to be an issue in the requirements, resulting in an ImportError related to werkzeug.
ocpsm	Web App (backend and frontend have to be run manually)	minimal and incomplete in repository	Leading Type, E2O selects so for each activity to select one object, Petri Net guiding through simulation	Petri Net	No Python package management is provided.
Proppa	Web App (manually build with docker)	in repository with demo video	Constraint Graph Builder, OCEL Fields	Petri Net	The python-dev environment is not installable and has no viable build candidate due to dependency rot.
ocpq	Native Applications, (through native installers build with tauri)	https://ocpq.aarkue.eu/	Constaint Graph Builder, Specialized ocel fields, script windows	OCEL Graph, Query / Constraint Graph	Struggles to load the ContainerLogistics log in sqlite. Installers for Arch had to be fixed.
qrpm	Web App build with Dash	in repository with demo video	Plots of item Quantity, Filtering Inputs assisted with plots,	Quantity Net (Petri Net added with item nodes),	Depends on PyGraphviz and requires additional setup, which could not be completed.
oxminer	Web App (backend and frontend have to be run manually)	minimal and incomplete in repository	Fields populated with OCEL properties, Script Window	Directly Follows Graph	No Python package management is provided.
proact	Dockerized web app	in repository	Gnat-Chart, Constraint Graph Builder, OCEL Fields	Directly Follows Graph	The Docker script fails to build, seemingly after a refactor in which the default logs were moved. It appears to be Proppa implemented in React.
occnet	Input through CLI launches a react app to visualize Casual Net	in repository	Casual Net	Casual Net	There is a version mismatch between OCPA and the code, resulting in import failures and a non-runnable setup.
precfit	Script			Petri Net	Requires Python 3.7
mmlpm					
alignments	In Jupyter Notebook	example provided, code really unstructured		Petri Net	Using pipenv leads to errors, while the requirements.txt works.
omop	CLI	in repository			Pandas is the only listed requirement, but it is not downloadable, and using a newer version results in errors.
graphnn	Jupyter experiment notebooks	minimal in repo			There is a package dependency conflict, and no compatible Python version could be found. The project depends on google-auth 2.23.1, which in turn requires urllib3 >= 2.0.5.
ococomot	CLI	minimal in repo		Petri Net	Has Yices as a dependency. The latest available version is 2.6.5, while the older required versions are missing modules. Uses pnml as exchange model
ocdm	cli	minmal and confusing	Object Centric DCR graphs	OC-DCR	The repository does not include the required log.
silentobjects	CLI	None		Petri Net	To run the example, the code has to be modified. Only the number of silent objects is returned, not the actual silent objects.
supervariants	CLI	None	Variant Tree	Variant Tree	No requirements are specified. After installing gurobipy and ocpa, it runs, but the visualization crashes.
totem	Jupyter Notebook	minimal in repo		ToTeM	Because imports are very slow, it initially appears that the code is broken. The result is output as ToTEM through the console.
etherum	CLI	in repository			The Python version is not specified, so Python 3.13 does not work. The requirements include pywin32, which is not usable on Linux.
aoe	CLI, Jupyter Notebook	in repository			No requirements or pinned packages are provided, only a pip install command.
textmining	CLI	in repository	Api keys		No Python version is specified. Python 3.11 is required due to NumPy.
